†FOSSILS, OF EXTINCT ORDERS.

The classification of Insects, recent and fossil, HANDLIRSCH, Die fossilen Insekten; 4 parts Leipzig, 1906. To be completed in eight parts. In recording this work we have followed the classification of the author in so far as it relates to extinct orders of Insects. These are therefore arranged apart; but the novelties pertaining to existing orders are placed in our Record under their appropriate headings. The others we now deal with below. For a translation of the portions of the work relating to American fossil insects vide HANDLIRSCH, **2.** A portion of this

translation appeared before the original; hence some of the novelties are to be considered as named for the first time in the translation. Unfortunately the references to the original work are incomplete in the translation, so that many forms have the false appearance of being there described for the first time. A part of the translation may, however, have preceded in publication the corresponding part of the original work.
